Cover letter

Hello Darren,

I am applying for this position as I think there is some interesting work to be done and I have the right experience for it, based on position requirements, and my experience. Mainly as you need a PHP developer and someone with experience of working with old monolithic systems and also with current technologies.

I am not really good at writing cover letters, but it is required (probably) by that API endpoint for submitting the position application.

Kind regards

Peter Labos
